

4 Benefits of Migrating PSTs to the Cloud

Eliminate the need to backup laptops/workstations

01

Our customers tell us that the remaining reason they are still backing up end-user devices is to protect PST files from loss or corruption

Better Compliance and Faster eDiscovery

02

Moving PST data to an online mailbox allows for proper retention policies to be applied as per corporate data governance policies

Mitigate risks of Data Breach and Data Loss

03

With your PST content in an online mailbox, you can be sure that it will be protected by Microsoft 365 security controls and Microsoft's SLAs for data protection

Access from Anywhere

04

Once migrated, end users will be able to access their PST content from any device or application which has access to their Microsoft 365 mailbox
