

Cloudficient™ Announces Pay as You Go Pricing for Email Archive Migration

Delivers a fixed-price/fixed-outcome service for migration of legacy email archives to Office 365

Zurich, Switzerland: February 20, 2018

Cloudficient™, the Office 365 management solutions provider, today announced pay-as-you-go pricing for its email archive migration as a service offering. It offers a migration service, with no long-term commitment, from as little as \$3990 per Terabyte. You pay only for data that is successfully migrated, there is no long-term lock-in should migration plans change.

Cloudficient is able to provide this ground-breaking approach due to a combination of experience, automation and the pro-active monitoring provided by the Cloudficient technology stack.

With pricing starting as low as \$3990 per Terabyte migrated, Cloudficient is the first vendor to offer transparent pricing that allows customers to make a truly informed decision on their solution for email archive migration.

Historically, email archive migration vendors have been reluctant to make public their pricing models. Instead they have preferred to hide overall pricing behind tailor made project plans that often result in additional (and unexpected) implementation costs and unmet expectations. Our email migration as a service offers the quality result without any hidden Cloudficient costs.

"The team at Cloudficient has unrivalled experience in email archive migration," said Peter Kozak, CEO of Cloudficient. "I have been leading email archive migration projects for over a decade and have used many different approaches and technologies. My experience means that I am confident that at Cloudficient we have the best people, the best technology and the best methodologies. This is why we can offer a fixed, transparent price, and we take the risk if the unexpected happens."

The key benefits of Cloudficient email archive migration as a service include:

- Fixed Outcome: successful migrations that meet the legal, technical and business requirements
- Budget certainty: a fixed price for the cloudficient migration, based upon the volume of email archive to be migrated

- Complete solution: includes technology, professional services and support throughout the project
- Quality processes: delivers a fixed outcome independent of the discovery of unseen complexities
- Affordable: the starting price can be as little as USD \$3,990 per Terabyte
- Flexible: an option for no minimum commitment is available as no-one can predict the future

Peter Kozak continues, "Email archive migration pricing has always been a bit of a mystery for the enterprise. Initial prices are usually indicative estimates, as are the deliverables. Projects are often based purely on the price vendors believe that customers are willing to pay. In addition, prices normally flex up as the solution provider realizes the complexity of the project. We want to stop that."

Cloudficient's email archive migration as a service is available immediately in The Americas and EMEA.
